

# ELM CITY COMPOST Sustainable Event Guide

## What is Sustainable Waste Management?

Sustainable Waste Management is the practice of diverting as much organic and recyclable material from the landfill. This event is making the extra effort to ensure material can go back into the supply stream or back into the soil.

## Things to know

- Compost is one of the easiest ways to promote sustainability in your area and reduce our carbon footprint.
- All waste stations have a compost bin, trash bin, and recycling bin
- Read the signs to know how to sort your waste
  - There are more compostable products than you may think, please help our team by sorting waste at the bins
- Recycling should be relatively clean before being disposed
- All compost is brought to Windham Solid Waste Management District for commercial composting

## Who is Elm City Compost?

Elm City Compost is a grassroots waste hauler in Keene NH that focuses on food/organic waste. If you are local and want to know more check out our website! If you are not local we hope you bring an interest in sustainable waste management back to your region.
